

## ORNAMENT COLUMN

Created By Chris Horne, Amscan International Limited.

Ideal for filling large spaces quickly, this design can be made as tall as you like. It can be helium filled and flown from the floor upward, or air filled and suspended from above.

### Product Required (to build as picture):

- 4 x Red Holiday Ornament (1479301)
- 6 x 26" Holographic Foil Crescents: (1624499)
- 1 x Silver Star Weight (117800-18)
- Self Adhesive Hook and Loop Tape and Cable Ties

### Construction Method:

1. Inflate all the balloons with helium if flying from the floor, or with air if the design is to be suspended.
2. Attach one of the ornament balloons to the weight by passing the tail through the loop on the top of the weight, and securing with a cable tie.
3. Join the other ornament balloons to the first in a chain by joining them together with cable ties. Overlap the tail of one balloon and the hanging tab of the next and pull the cable tie tight around the overlap.
4. Make 3 x pairs of crescents by joining the tails of two balloons using a cable tie.
5. Wrap a pair of crescents around the joins between the ornament balloons, and secure the crescents in place using small pieces of hook and loop tape.

### Estimated Labour time: 15 minutes.

To make the design a little more "3D", use 12 crescents instead of 6, and wrap two pairs together before wrapping between the ornament balloons.

To comply with California Law, the entire design can be air-filled and suspended from above on monofilament line.
